#### V. Liquidity information

#### 1. Liquidity maintenance ratio

The average liquidity maintenance ratio is the simple average of each calendar month's average liquidity maintenance ratio calculated in accordance with the Banking (Liquidity) Rules (Rule 48) made by the Monetary Authority under section 97H of the Banking Ordinance.

Year Ended	Quarter Ended	
31 Dec 2017 %	31 Dec 2018 %	
285.63	322.67	Average LMR

#### 2. Approach to liquidity risk management

Wells Fargo Bank, N.A., Hong Kong Branch ("the Branch") has primary responsibility for ensuring it is able to meet all on and off-balance sheet obligations as they mature without incurring excessive cost, while continuing to fund its assets and growth therein. The Branch is required to comply with the liquidity regime prescribed by the Hong Kong Monetary Authority ("the HKMA") and to meet the HKMA's requirements. The Corporate Governance Groups of the Branch has the responsibility to ensure that the liquidity risk management policies and practices of the Branch are in accordance with its globally coordinated, centralized approach to liquidity risk management.

The Branch's liquidity management policy ("the Policy") is reviewed and approved by APAC Regional Asset and Liability Committee ("APAC ALCO") and Hong Kong Branch Management and Control Committee ("HKMCC") on an annual basis. However, it is likely that the Policy will evolve on a more frequent basis as business activity changes in response to stress test outputs or a changing regulatory environment.

Proper liquidity management requires an organizational structure with clearly defined segregation of roles and responsibilities. The Multi-Currency Treasury group in APAC ("MCT APAC") formulates the funding strategy, manages the liquidity and funding needs, and the mismatched FX exposure of the banking book of the Branch. The APAC ALCO, HKMCC and Independent Risk Management provide oversight and credible challenge of MCT's liquidity risk management strategies and assumptions. MCT APAC reports and discusses liquidity strategies, issues and risks with APAC ALCO and HKMCC in their regular meetings.

Hong Kong Branch

Liquidity limits are established to ensure that the Branch maintains appropriate liquidity under both normal and stressed conditions. Liquidity risk reports on the liquidity maintenance ratio ("LMR") and the cash balance projection are produced daily. The monthly liquidity stress testing is to measure the LMR and the minimum cash balance within 3 months under idiosyncratic, market-wide and combined stress scenarios. The stress testing results are reported to APAC ALCO and HKMCC. Proper escalation and notification processes to report breach of any liquidity limits to HK Branch Crisis Management Team, APAC ALCO and HKMCC are established. MCT APAC is required to take corrective actions immediately. As it is crucial to the Branch's viability to maintain appropriate liquidity, a contingency funding plan (CFP) is in place to address liquidity needs under a market-wide, idiosyncratic and/or a combination stress event. The CFP includes procedures for monitoring emerging liquidity events, a governance framework and management process, and potential mitigating actions which the Branch could undertake.

The Branch has two sources of liquidity to meet its funding. The primary source is intra-group funding from Head Office. The Branch also sources liquidity directly from customers who have a need to place their cash with a secure financial institution. These customer deposits are a useful source of liquidity and a tool by which the Branch can effectively manage currency balances. Furthermore, this activity serves as an advance warning indicator as to the health of both the wholesale money market and of the Branch's standing and perceived financial strength from time to time.
